FOR IMMEDIATE RELEASE

*Hargis Engineers expands its leadership team*

March 21, 2014- Hargis Engineers is proud to announce the expansion of its executive and senior leadership team.

Erik Stearns and Phil Radics earn the distinction of Principal, and Brian Cawley joins as Senior Associate. Stearns has 22 years of electrical engineering experience serving higher education, municipal, federal, military, high-technology and commercial clients. Radics brings forth 25 years of experience in consulting to Fortune 500 and 1000 companies to Hargis telecommunications and electronics security disciplines, and serves enterprise and campus-oriented environments. With nine years of mechanical engineering experience, Cawley serves academic, institutional and high-technology clients.

Hargis is also pleased to recognize the promotions of eight new associates - Rawley Reeser, Ryan Callahan, Zachary Clem, Chris Skiles, David Bultez, Shane Fischer, Doug Svee and Joseph Llona.

Reeser, a mechanical engineer, and Callahan, an electrical engineer, are both providing services for Nordstrom's full-line stores and Nordstrom Rack locations. Clem applies his knowledge of telecommunications systems to serve financial, retail and high-technology facilities, including Nordstrom. Skiles is well-versed in serving technology-enriched projects on local, regional and international scales. Bultez, a telecommunications and electronic security specialist, supports K-12, institutional and commercial high-technology clients as both a prime and sub consultant lead. Fischer focuses on integrating telecommunications systems into projects both on a standalone and enterprise scale. Svee applies his knowledge of electrical and lighting systems to serve educational, healthcare, correctional and commercial tenant improvement spaces. Offering over 30 years of experience, Llona leads mechanical engineering services for academic, government, military and mission critical environments, and specializes in central heating and cooling plant projects.

With the belief that stability is the foundation from which we attract and retain team members and clients, Hargis has maintained a level of consistent growth that has created the need for additional leadership. These 11 promotions support Hargis' expansion of its mechanical, electrical, telecommunications and electronic security consulting services.

For more information, please contact Shannon McLaughlin at (206) 448-3376.

Hargis Engineers is a mechanical, electrical, telecommunications and electronic security consulting engineering firm. Established in 1955, we are committed to provide professional services responsive to our clients' diverse operating environments on a local, enterprise and global level.
