

correctional & rehabilitation

Hargis has supported minor and major capital projects at minimum, medium, close custody, intensive management, segregation and hybrid-security complexes. Our involvement in a wide breadth of projects completed under the spectrum of delivery options and fulfilling an array of consulting roles, has translated into an in-depth understanding of correctional industry standards, operating environment and ability to bring consistency to each project entrusted to our leadership. We have demonstrated an ability to lead and collaborate with multi-faceted project teams, while providing technical leadership to drive design decisions, produce quality deliverables and work in concert with various contractors to ensure systems are installed with quality per the design intent. This level of professionalism has fuelled Hargis' reputation for providing project deliverables that meet owners' objectives; fostering a competitive bid environment; maintaining schedules; and completing projects within or below budget.
