

CAREER OPPORTUNITIES

Project Manager

A detail-oriented individual with strong communication and consulting skills with an average of 6-12 of years experience designing commercial mechanical, electrical, telecommunications or electronic security systems. PE license, LEED® accreditation or RCDD certification preferred. Common duties include (but not limited to): serve as a primary point-of-contact, fulfill consulting engineering services in all phases of design, develop cost opinions and specifications, prepare life-cycle cost analysis and energy modeling, integrate building automated systems, and fulfilling bidding, construction administration, and project closeout services including commissioning.

Project Designer

Self-motivated individuals who design in AutoCAD and Revit with 3-5 years of experience in commercial building design of mechanical, electrical, telecommunications or electronic security systems. Common duties include (but not limited to): design layout; interface with design-team; coordinate with intra-office disciplines; construction and prepare bid documents; support specification documentation; coordinate with local jurisdictions; review submittals, and support construction administration efforts.

“What I’ve found is a blend of engineering, business and hands-on learning. My career continues to evolve as I face new possibilities, and that for me is why there is so much potential for personal and professional growth”

Hargis Mechanical Engineer
